ARCHERPOINT

Cybersecurity Solutions for

Microsoft Dynamics Business Central Customers

While Dynamics 365 Business Central is exceptionally secure, there are still opportunities to harden security and ensure best practices.

Your business-critical data and operations rely on the security of your Microsoft Dynamics system. With cyber threats evolving alarmingly, ensuring your system is fortified against potential vulnerabilities is crucial.

ArcherPoint's Vulnerability Assessment and Penetration
Testing Services help safeguard your business, protect sensitive information, and maintain your customers' trust. Cybersecurity and cyber risk awareness is a continuous process, not a product.

Through promoting and sustaining a cyber-aware culture, we strive to help make our clients more cyber-secure.

Why Choose ArcherPoint for Cybersecurity?

Expertise

Our team of cybersecurity experts has years of experience in securing Microsoft Dynamics Business Central systems. We know the ins and outs of the platform and the unique threats it faces.

Tailored Solutions

We understand that every organization is different. Our services are customized to your specific needs, ensuring a targeted and effective approach to security.

Proactive Defense

Identify vulnerabilities before cybercriminals do. Our proactive approach minimizes the risk of data breaches and costly downtime.

ARCHERPOINT

VAPT

Vulnerability Assessment

Our Vulnerability Assessment service analyzes your Microsoft Dynamics Business Central system's security posture. We start by identifying vulnerabilities in your system and applications, prioritize risks based on their impact and likelihood, then deliver actionable recommendations for remediation.

Penetration Testing

Our Penetration Testing service actively tests your system's defenses against known exploits. We will provide a detailed report with vulnerabilities, risk levels, and remediation guidance. We provide a report of the results based on network discovery, analysis of known exploits, and industry best practices.

We'll provide one free scan to your organization. Limited to one web application or one IP address/ domain. Does not include sub-domains. Excludes manual Pen Testing. Does not include manual verification of exploits. These activities include assessing your maturity level, internal controls, vulnerability management, and overall ability to make informed decisions regarding cybersecurity.

Our last steps will involve vulnerability assessments (VAPT) and analysis of the results to help us better understand how to reduce further the risk gap between your organization and the rest of the world.

This service bundle includes:

- Recommendations for implementing NIST CSF (National Institute of Standards for Technology Cybersecurity Framework) and multi-cloud benchmarked best practices.
- Full audit of internal IT security processes, i.e., password management.
- Vulnerability Assessments.
- Social Engineering and Phishing resistance testing.
- Collaborative remediation discussions based on assessment results.

Cloud Security Assessment Bundle

Through a set of assessment activities specifically designed to gauge security controls, vulnerabilities, and risks in cloud environments, we will work together to determine and improve your cybersecurity.

Contact ArcherPoint

Don't wait for a cyber incident to disrupt your business. Contact ArcherPoint today to schedule a consultation and start strengthening the security of your business systems.
